

CDOP TWG Work Status

Context: The following visual highlights the work status of CDOP's Technical Working Group (TWG) in terms of the schema development process. Each bolded column header has a specific definition associated with that particular stage and nestled beneath those headers are the schema categories and their respective level of maturation.

----->----->----->----->

1. Scoping	2. Harmonization	3. Testing	4. Operationalization
Co-Benefits Crediting Period Estimations Project Finance [among others]	Unit Description Label/Certification		Location Details Project Approach & Details Issuances Disclosures

Header Definitions:

1. Scoping – These categories are in varying stages of being mapped using TWG's Mapping Tool. They are future categories that will eventually undergo the following stages.
2. Harmonization – The process of unifying the disparate submitted schemas by mapping the relevant fields present against relevant metadata fields into a unified schema for that category.
3. Testing – Categories present here are in the initial development stage. A schema for this category has been developed and is being tested by TWG membership testing volunteers. Revisions to the schema will occur as needed based on testing feedback until it's ready to enter the next stage.
4. Operationalization – The schema that includes the respective categories listed in this stage has successfully made it through testing and enjoy consensus from CDOP membership. The CDOP schema at this stage can begin to be integrated into internal systems used by market participants, with the recognition that it is in a state of continual evolution.
